

Customer portal to give real-time visibility of network and capacity.

STRATEGY AND DELIVERY OF INTEGRATED
ANCILLARY APPLICATIONS

THE OVERVIEW

Aurizon transports more than 250 million tonnes of Australian commodities, connecting miners, primary producers and industry with international and domestic markets

THE CHALLENGE

Elevating Aurizon's development methods and stack while integrating with Vista, Aurizon's network management tool.

Lacking a user interface to enter data into the application

Too complex for Aurizon customers to use

Inability to effectively schedule crews and activities on time

No visibility of the Day of Operations

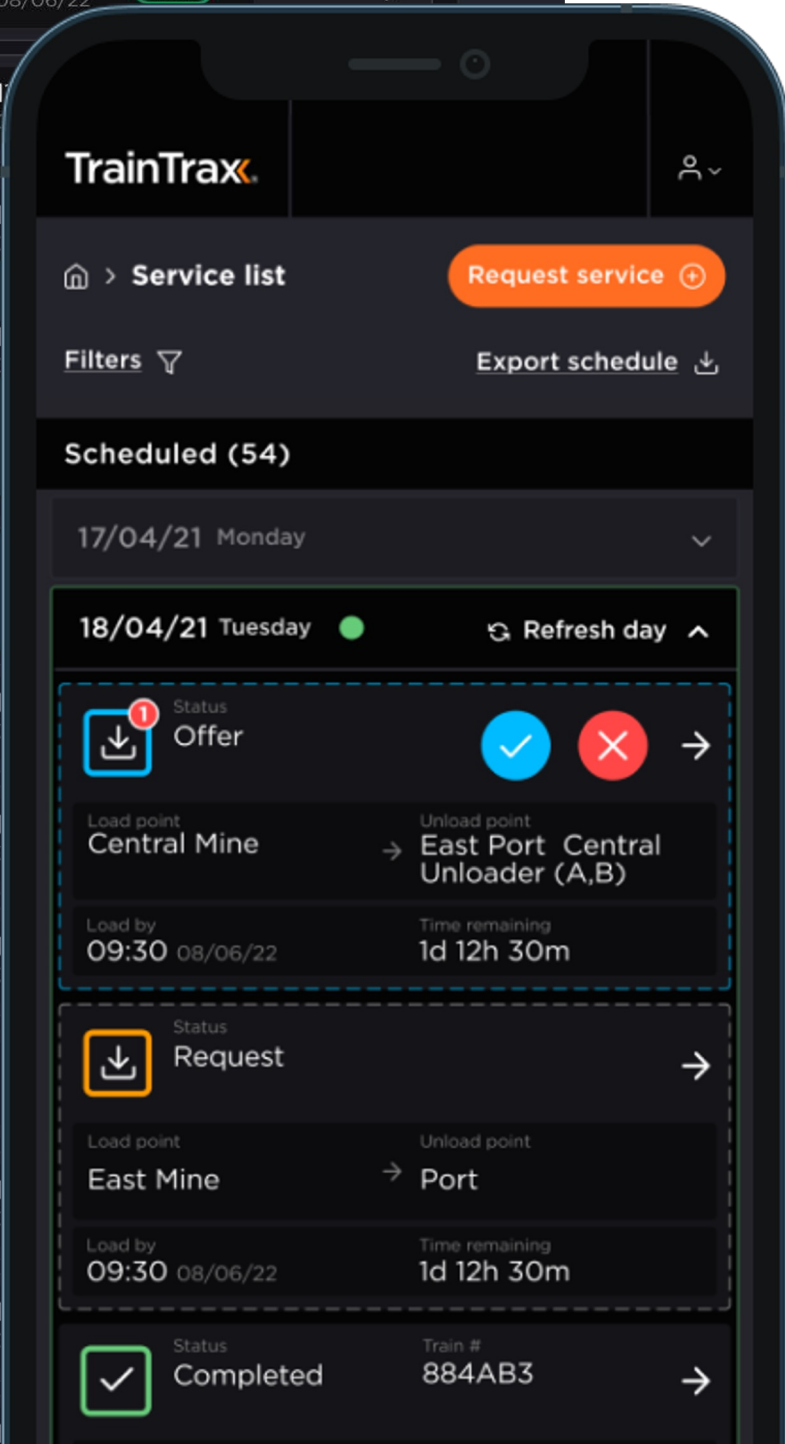

Inability to understand the status and changes of trains operating

Lacking visibility required for schedule tracking

Scheduled (54)	Status	Train #	Load point	Unload point	Scheduled	E.T.A	O.T.P	Actions
